AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

The listing of claims will replace all prior versions, and listings, of claims in the application.

LISTING OF THE CLAIMS

1. (Currently Amended) A method of performing software demonstration comprising: providing an identified user with access, via a network, to a server comprising a program to be demonstrated; receiving code from said identified user; executing on said server said program to be demonstrated using said code received from said identified user and, providing any results of said execution based on the execution of the demonstration program manipulating the code received from said identified user.

2. (Original) a method as in claim 1 wherein said server is a highly secured server.

3. (Original) A method as in claim 1 wherein said providing an identified user with access, via a network, to a server comprising a program to be demonstrated further comprises identifying a user and providing said identified user with access, via a network, to a server comprising a program to be demonstrated.

4. (Original) A method as in claim 1 wherein said providing an identified user

with access, via a network, to a server comprising a program to be demonstrated

further comprises identifying a user and providing said identified user with

access, via the Internet, to a server comprising a program to be demonstrated.

5. (Original) A method as in claim 4 wherein said identifying a user further

comprises identifying a user through supplying a user with a unique, operational

email address.

6. (Original) A method as in claim 4 wherein said identifying a user further

comprises identifying a user through supplying a user with a unique, operational

user ID.

7. (Original) A method as in claim 1 wherein said providing an identified user

with access, via a network, to a server comprising a program to be demonstrated

further comprises providing an identified user with access, via a network, to a

server comprising an email scanning program to be demonstrated.

8. (Original) A method as in claim 1 wherein said providing an identified user

with access, via a network, to a server comprising a program to be demonstrated

further comprises providing an identified user with access, via a network, to a

server comprising a proscribed code scanner program to be demonstrated.

9. (Original) A method as in claim 1 wherein said receiving code from said

identified user further comprises receiving email from said identified user.

10. (Original) A method as in claim 9 wherein said receiving email from said identified user further comprises receiving a predetermined amount of email from said identified user.

11. (Original) A method as in claim 1 wherein said receiving code from said identified user further comprises receiving code for a predetermined time from said identified user.

12. (Original) A method as in claim 1 wherein said executing said program to be demonstrated using said code further comprises executing an email scanning program to be demonstrated using email provided by said user.

13. (Original) A method as in claim 1 wherein said providing any results of said execution further comprises providing any results of said execution via a web page.

14. (Original) A method as in claim 1 further comprising providing said identified user with an option to purchase said program.

15. (Original) A method as in claim 1 further comprising providing said server with a secure shut down mechanism.

16. (Currently amended) A method of performing software demonstration
comprising: providing an identified user with access, via a network, to a server
comprising at least two programs to be demonstrated; receiving code from said
identified user; executing on said server said programs to be demonstrated using
said code; and, providing any results of said execution, and wherein each of said
programs to be demonstrated is executed on the same user code received form
said identified user.

17. (Currently amended) A method of performing software demonstration
comprising: identifying a user; providing said identified user with access, via the
Internet, to a server comprising a program to be demonstrated; receiving email
from said identified user, said email comprising code upon which said execution
results are derived through said program execution on said email code; executing
on said server said program to be demonstrated using said email as the target of
said demonstration; and, providing any results of said execution via a web page.

18. (Currently amended) An apparatus for software demonstration comprising: a
server configured with a program to be demonstrated installed thereon; a server,
said server being accessible to an identified user, wherein said program to be
demonstrated is provided on said server, said server being configured to receive
code from said identified user machine, execute said received code with said
program to be demonstrated, and provide results of said execution based on the
application of said program to be demonstrated to said code, wherein said server

5

and said program to be demonstrated installed thereon are configured to

manipulate said received code to provide a result, based on said received code that

corresponds with the program to be demonstrated to provide the results that would

have been obtained if the program were installed on the user machine from which

the received code was obtained, wherein said apparatus further includes a network

in which said code is received by said server from said identified user.

19. (Original) An apparatus as in claim 18 wherein said program to be demonstrated

comprises an email scanning program.

20. (Currently amended) An apparatus as in claim 18 wherein said ~~serer~~ server is

configured to receive email from said identified user.

21. (Original) An apparatus as in claim 18 wherein said server is accessible to said

identified user via the Internet.

22. (Original) An apparatus as in claim 18 wherein said server is configured to

provide results of said execution via a web page.

23. (Original) An apparatus as in claim 18 wherein said apparatus is in distributed

form.

24. (Currently amended) An article of manufacture comprising at least one server

<u>configured with a program to be demonstrated installed thereon and being</u> configured

with a web site providing access to a program to be demonstrated, whereby said

program to be demonstrated executes with said server said code provided by an

identified user and said web site further provides results of said execution.

25. (Original) An article as in claim 24 wherein said website further provides results

of said execution via a web page.

26. (Previously presented) A method as in claim 13, wherein said web page

accessible to one or more of said user and others.

27. (New) The method of claim 1, wherein said server and said program to be

demonstrated are configured to execute said program to be demonstrated by

manipulating said received code as part of said program execution to provide a result

based on said received code that corresponds with the execution of said program to be

demonstrated using said received code, and,

    wherein said results provided comprise the results that would have been obtained

if the program were installed for operation on the user machine from which the

received code was obtained.

28. (New) The method of claim 27, wherein said user upload of said code that is to

be received by said server from said user for use in execution by the demonstration

program is automatically configured to upload said code to be run to the server, and

wherein said server is configured to run said received user code.
